Network administrators can streamline Windows Server 2000 and 2003 management by grouping policy settings to monitor and regulate users and the network's computers; Group Policy concepts and tools allow them to enforce rules and automate processes. Revised for Windows Server 2003 SP1 and Windows XP SP2 with new material, including extensive coverage of network security, this work provides background information for planning, creating, and applying Group Policy settings and offers extensive coverage of troubleshooting techniques. It includes ready to use scripts to automate routine administration tasks
